immunogenic portion of a prostate tumour protein (PTP). The polypeptides and polymucleotides encoding them have cytostatic activity and can be used in vaccines and in gene therapy. The polypeptides and bolymucleotides encoding them, antigen presenting cells which express the polymeptides, antibodies against the polypeptides and vaccines comprising patient. The polypeptides are development of prostate cancer in a patient. The polypeptides can be used to generate antibodies or antibodies for passive immuno therapy. A portion of the modulate the expression of the polypeptides can be used as a probe or to modulate the expression of the polypeptides. AAAA6241 to AAA6691 and AAX82000 to AAX82000 represent sequences used in the exemplification of

The present invention describes polymucleotide sequences (I) which encode prostate-specific proteins (II). (I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I), (II), antibodies to (II), fusion proteins comprising (II), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and the antibodies are also used in the detection of cancer in a patient. The cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies or (I) can be used for monitoring the progression of cancer in a patient. (I) and (II) can also be used to improve diagnostic and therapeutic methods for prostate cancer. They can indicate the level of metastasis as well as the prostate polymucleotide and amino acid sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polymucleotide and/or polypeptide are useful for stimulating an immune response, and for treating cancer. The oligonucleotide is useful for detecting cancer. The prostate specific polymucleotide of the invention
                                                                    Sequence 647 BP; 190 A; 141 C; 154 G; 161 T; 0 U; 1 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WO200125272-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Homo sapiens.

                                                                                                                                                               900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polypeptides, fusion proteins of the polypeptides, antibodies raised against the polypeptides (or antigenic epitopes derived from them) and antigen-presenting calls expressing the polypeptides. The antibodies are useful for detecting the present of cancer, especially prostate cancer. The polypeptides, polymucleotides and the antigen-presenting calls are useful for stimulating and/or expanding T calls specific for a tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          human prostate-specific polypeptides and polynucleotides useful for diagnosis and treatment of cancer, especially prostate cancer.

The present invention describes an isolated polypeptide (P1) comprising at least an immunogenic portion of a prostate-specific protein, or its variant. Also described are polymucleotides (N1) encoding (P1). (P1) and (N1) have cytostatic activity and can be used in vaccine production. The polypeptides, nucleic acids and antibodies from the present invention are useful in the diagnosis and therapy of prostate cancer. Prostate specific genes P704P, P712P, P775P and B305D are located in a genomic region on chromosome 22q11.2 known as the Cat Bye Syndrome region.

Prostate specific antigen (PSA) P501S was located on chromosome 1.

AAH84671 to AAH85143 and AAG99000 to AAG99077 represent polynucleotide and polypeptide sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                 The present invention describes an isolated polypeptide (I) comprising at least an immunogenic portion of a prostate tumour antigen protein or its variant. (I) have cytostatic activity and can be used in vaccine production. (I), prostate tumour antigen polynucleotides, an antigen presenting cell (APC e.g. a dendritic cell) that expresses (I), and a pharmaceutical composition containing (I) are useful for inhibiting the development of cancer in a patient. Antibodies specific for prostate specific proteins and oligonucleotides that hybridise to a polynucleotide that encodes a prostate specific protein are useful for detecting the presence or absence of a cancer or monitoring the progression of a cancer or monitoring the progression of a cancer, especially prostate cancer. AAH02422 to AAH2872, AAB7498 to AAB74821 and AAB74830 are sequences used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             600
The present invention describes compositions comprising peptides derived from the Wilm's tumour protein WT1 and methods for their use in treating malignant diseases. Peptides derived from both the murine and human WT1 proteins are provided. The human WT1 gene is found on chromosome 11p13, and the protein was shown to be a zinc finger transcription factor. The immunogenic peptides of the invention are particularly useful in the diagnosis and treatment of cancer and leukaemia. The present sequence is a coding sequence used in the exemplification of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes a fusion protein comprising at least one amino acid sequence of immunogenic portions of any of the 3 sequences not defined in the specification, or sequences having at least 70 or 90 % sequence identity to any one of the 35 sequences defined in the USPTO web site, which is encoded by any of the 4 nucleotide sequences not defined in the specification. The fusion protein, composition and methods are useful for diagnosing, preventing and/or treating cancer, particularly prostate cancer. The proteins are useful as markers to indicate the presence or absence of cancer. This sequence represents a prostate cancer therapy associated cDNs. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at sequence. Last of the printed specification, but was obtained in electronic format unspto.gov/sequence.html?DocID=US20020192763
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Prostate specific protein and its encoding polynucleotide, useful for the treatment and diagnosis of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

The present invention relates to novel prostate-specific proteins (PSP) and their coding sequences. The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New prostate-specific proteins and genes, useful in gene therapy, particularly for stimulating an immune response in a patient, or treating prostate cancer in a patient, as well as for diagnosing prostate cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides prostate-specific coding sequences and their encoded proteins. These can be used in the diagnosis and treatment of cancers, particularly prostate cancer. The present sequence is a cDNA described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

New isolated polypeptide for use in a vaccine for stimulating an immune response, or for treating or diagnosis cancer, preferably prostate

Example 3; Page; 101pp; English.

The invention relates to an isolated polypeptide comprising no more than 11-542 amino acids of ADB1353 comprising a sequence ADB1487. The peptides comprises a fragment ADB13563 of that contain naturally processed T-cell epitopes for 3 class I major histocompatibility complex (MHC) alleles. ADB13563 is a polypeptide encoded by a human prostate specific companion one of 68 disclosed as new. Also included are nucleic acids encoding the proteins and peptides expression vectors, a host cell transformed with the vector, an isolated antibody (or antigen binding cransformed with the vector, an isolated antibody (or antigen binding cransformed with the vector, an isolated antibody (or antigen binding cransformed with a binding agent that binds to the pretein or peptide, detecting the sample with a binding agent that binds to the peptides or a polypeptide cample with a binding agent that binds to the peptides or a polypeptide cample in a patient comparing the amount of polypeptide to a predetermine the presence of cancer), a fusion protein coff value to determine the presence of cancer), a fusion protein comprising the peptides or proteins, stimulating or eals that the peptides or proteins, stimulating or eals that the peptides or composition comprising the peptides, antibodies or composition comprising cells that express concer in a patient and treating prostate cancer in a patient and treating prostate cancer in a patient with the peptides or antigen presenting cells that express concer in a patient with the peptides or antigen presenting cells to the patient. The peptides (or an oligonucleotide that hybridises to nucleic acids encoding, or antigen-presenting cells expressing the nucleic acid, are used to antigen-presenting ells expressing the nucleic acid, are used to antigen-presenting cells repressing the nucleic acid, are used to antigen-presenting cells for the peptides.

presenting cells are used to stimulate an immune response or treat prostate cancer in a patient. The present sequence is one of the disclosed human prostate specific CDNAs. Note: Except where otherwise indicated, the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human prostate-specific polypeptides and the polymucleotides encoding them. The invention also relates to an isolated antibody or its antigen-binding fragment that specifically binds a polypeptide of the invention, a method of detecting cancer in a patient comprising contacting a biological sample of the patient with an agent that binds a prostate-specific polypeptide and comparing the amount of bound polypeptide compared to a predetermined cut-off value and a fusion protein comprising a prostate-specific polypeptide. The sequences of the invention are used to diagnose and treat cancer, particularly prostate cancer. This sequence represents cDNA encoding a human prostate-specific polypeptide of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.html.
.w polynucleotides encoding prostate specific polypeptides isolated
human prostate tumor cDNA library are useful to diagnose and treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 647;

The fusion proteins can be used for diagnosing, preventing, or treating cancer, such as prostate cancer. The prostate specific proteins were isolated from a human prostate tumor cDNA library. The present sequence is one such cDNA clone which was isolated in the prostate-specific cDNA library. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequata uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New fusion protein comprising a P501S polypeptide and an unrelated fu partner, useful for diagnosing, preventing, or treating cancer, such prostate cancer.
                                                                                                                                                                                                                                                                                                      Y, Reed SG;

11-542 amino acida of ADB13563 comprising a sequence ADB14487. The peptides comprise a fragment ADB13563 of that contain naturally processed T-cell epitopes for 3 class I major histocompatibility complex (MHC) alleles. ADB13563 is a polypeptide encoded by a human prostate specific Tomba, one of 648 disclosed as new. Also included are nucleic acids concoling the proteins and peptides, expression vectors, a host cell tragment) that specifically binds to the protein or peptide detecting tragment) that specifically binds to the protein or peptide detecting the presence of a cancer in a patient (comprising contacting a patient campering the amount of polypeptide that binds to the protein or appearing as ADB1358, detecting the amount of polypeptide that binds to the agent and comparing the amount of polypeptides or a polypeptide appearing as ADB1358, detecting the amount of polypeptide that binds to the agent and comparising the presence of cancer), a tusion protein current comprising the peptides or proteins, stimulating or expanding T cells specific for a tumour protein comprising contacting T cells peptides or the solated T cell population, treating prostate cancer in a patient and treating prostate cancer in a patient and treating prostate cancer in a patient and treating prostate cancer in a patient and treating prostate cancer in a patient the T cells proliferate, and administering the peptides or antigen presenting cells to the patient. The peptides (or an oligonucleotide treating calls to the patient. The peptides (or an oligonucleotide cantigenes to nucleic acid encoding them), is used to detect the presence of cancer in a patient. The peptides, mucleic acids encoding, or stimulate or expand T cells specific for a tumour protein. The peptides, nucleic acids encoding the content protein apparent esequence similarity to one of the disclosed human prostate cancer in a patient. The present sequence is a known cDNA showing sequence similarity to one of the printed specification, the patient of the patient of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GGGAACAATGGCTGAGCATATAACCATAGG----TATGGGAACAAAAAAAAAGTCAC 1111

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5
                           The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; determining whether prostate cancer has metastasized in a patient; (i) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker

(MILL-) MILLENNIUM PREDICTIVE MEDICINE INC.

Monahan JE Endege WO, Schlegel R,

WPI; 2001-662795/76

Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.

Claim 1; Page 3587; 11750pp; English

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (d) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker

Sequence 1481 BP; 364 A; 346 C; 314 G; 453 T; 0 U; 4 Other;

Gaps 4; Length 1481; Indels Score 599.2; DB 5; Pred. No. 2e-184; 0; Mismatches 9; Query Match 92.8%; Best Local Similarity 98.0%; Matches 628; Conservative
